:DIGITAL Transformation

Technological advancements have dramatically reduced the time it takes the world to bring weapons systems from concept to employment on the battlefield – failure to adapt can be catastrophic. To operate at the speed of now, it takes the right people, data, and methods all working together. At Sabel Systems, we partner with you throughout your Digital Transformation with the people, technology, and know-how to develop fully digital solutions tailored to your needs. Implemented correctly, the digital enterprise easily outperforms outdated brute force methods used to acquire and sustain weapon systems, potentially cutting acquisition cycle times up to 70% and rework costs by 50%.

:SABEL Systems

Our hyper-converged, platform-agnostic (cloud/on-prem) Digital Engineering Cloud® provides access to modern Model-Based Systems Engineering techniques; Modeling, Simulation, and Analytics; PLM; CAD; CAE; collaboration; and Program Management. Developed as part of the AFWERX Small Business Innovation Research program, we have helped end users in the DoD, Federal, industry, and academia across multiple security classification levels ranging from Public/Non-critical Information (IL2) through Unclassified (IL5), Secret (IL6), and Top Secret (IL6+).

Our people are just as agile as our technology. We tailor our teams with the best digital engineers, software architects, logisticians, cybersecurity professionals and more to partner with you and quickly customize solutions to your exact requirements. Helping you solve urgent and future needs, at lower cost and with less risk is our business because Sabel understands your mission cannot fail.
